AI Product Intern Assignment

Deadline: 48 hours from when this assignment was shared with you. Late submissions are not considered.

Constraints

- **48 hours** from when you received this. Submit before then.
- Use **any AI tools** you like (Claude, Codex, Cursor or others), and any stack.
- The work and the words must be your own. Do not share this assignment or copy another candidate.

Part 1: The puzzle

A nutritionist takes consultations. Clients book, and then about **1 in 4 simply don't turn up**. She only finds out when she is sitting there waiting. She runs everything from WhatsApp and an Excel sheet.

How would you solve this for her? A few lines or a rough sketch is plenty. Tell us what you would do, and why. No code.

Part 2: The build

Build a small appointments product with **two sides that share the same data**. Design matters. Think of an app people would enjoy opening and want to come back to, not an admin panel. The audience is everyday clients of a wellness practice.

Include at least one thing that helps with the no-show problem from Part 1.

Side A: Client app (mobile first, feels like a polished consumer app)

1. A friendly home screen showing the client's next appointment.
2. Book a consultation: pick a date and an available time slot, enter name and phone. No double booking.
3. See upcoming and past appointments. Reschedule or cancel an upcoming one.
4. Calm, clean, pleasant look and feel. It should work well on a phone and still look good on a desktop.

Side B: Nutritionist dashboard

5. A list of appointments with client name, phone, date, time and status.
6. Status is one of **Booked**, **Done** or **No-show**, each in a different colour. She can change it.
7. Add an appointment by hand, and filter to see only today's.
8. Anything booked on the client side shows up here, and the other way round.
9. Load it with the sample data below.

Client	Phone	Date	Time	Status
Riya Shah	98200 11111	24/10/2026	10:00	Booked
Arjun Mehta	98200 22222	2026-10-24	11:30am	Booked
Riya Shah	9820011111	25-10-2026	4 pm	Booked
Meera Iyer		23/10/2026	09:00	Done
Kabir Rao	98200 33333	22/10/2026	14:00	No-show

If you spot something we should have asked for but didn't, add it. Tell us in one line what you added and why.

Submit

Email **info@kayro.io** with the subject line **AI Product Intern Assignment - Your Name**, and include:

1. **Hosted link** to your build, live and open without a login. Deploy it so we can just click and use it. Vercel is free and quick.
2. **GitHub link** to the code, with a README.
3. **Part 1 answer** as a PDF.
4. **Documentation** as a separate PDF, a few lines per heading: **What we were asked**, **Your approach**, **Decisions and assumptions** (including how you handled the sample data), **What you added**, **What the AI got wrong** (and how you caught and fixed it), and **How to run it**.
5. **Chat log** with Claude, Codex or whichever tool you used, as a PDF or a `.md` file: the prompts, the questions you asked, the clarifications and the corrections. Don't tidy it up.
